

Finally, an Affordable HD Borescope for Aviation

The SRV-J-4-1500 from USA Borescopes is set to change the industry landscape forever.

Clarksville, TN - USA Borescopes, one of the world's leading visual inspection equipment manufacturers, has officially unveiled the SRV-J-4-1500 HD inspection and welcomes experts from the aviation industry to request further details or place orders with immediate effect.

A Truly Portable HD Borescope with 360° Capabilities

Designed and developed specifically with the aviation industry in mind, the experts at USA Borescopes have successfully produced the smallest HD borescope for inspecting turbine blades, airframes, bores, and castings without removing or disassembling the finished component.

As well as its small diameter and portability, the SRV-J-4-150 provides 360° all-way rotating articulation and delivers crisp HD imaging so that users can inspect the full inspection area in a time-efficient manner. Compared to competitor products this system is also a budget-friendly solution boasting a host of desirable features and functions.

The portable aviation borescope is just 4mm in diameter and is available with a 1.5m or 3m cable, thus enabling the user to feel resistance. The unit features a 5" HD touch screen, joystick articulation for a user-friendly performance, digital zoom, photo or video recording in 1280x720pc via a Micro SD card, EV adjustment, 8-character text annotation, and WiFi App compatibility. It also comes with a charging cable, Micro SD card (and reader), HDMI cable, and HD case as standard. A manual is also included.

USA Borescopes' latest addition to its range of aviation visual inspection equipment also features a scratch-resistant sapphire glass lens, along with a durable borescope tip that can withstand oil and water leaks. It is perfect for the ongoing industrial applications of the aviation sector and can operate in a range of difficult circumstances, including a temperature range of 0°C to 60°C.

In addition to providing the perfect choice for HD inspections of aircraft, the SRV-J-4-150's 360° articulation makes it an ideal piece of equipment for a range of other applications including automotive inspections and manufacturing maintenance. Its unrivaled levels of maneuverability and durability allow users to see hard-to-reach areas in an undistruptive manner, thus saving time and money for the technician.

Whether using the portable borescope's imaging to complete real-time repairs or planning to record visual evidence to support the next steps, USA Borescopes' SRV-J-4-15 is the ultimate solution for daily inspections for aviation testing and repair projects.

The SRV-J-4-15 has already delivered benefits for experts across the USA, boosting productivity and efficiency with immediate results. Aviation companies and workers can order their devices now.

About USA Borescopes

USA Borescopes is a global supplier of world-class visual inspection equipment for a diverse range of industries, including everything from aviation to pharmaceuticals. Located in Tennessee, the company's highly experienced team of professionals is regarded for producing quality products and providing equally impressive client care.
